

**NOTES**    **4.7 Piecewise Functions****Piecewise Function**

A **piecewise function** is a function defined by two or more equations. Each “piece” of the function applies to a different part of its domain. An example is shown below.

$$f(x) = \begin{cases} x - 2, & \text{if } x \leq 0 \\ 2x + 1, & \text{if } x > 0 \end{cases}$$

- The expression  $x - 2$  represents the value of  $f$  when  $x$  is less than or equal to 0.
- The expression  $2x + 1$  represents the value of  $f$  when  $x$  is greater than 0.

**In Exercise 1–9, evaluate the function.**

$$f(x) = \begin{cases} 3x - 1, & \text{if } x \leq 1 \\ 1 - 2x, & \text{if } x > 1 \end{cases}$$

$$g(x) = \begin{cases} 3x - 1, & \text{if } x \leq -3 \\ 2, & \text{if } -3 < x < 1 \\ -3x, & \text{if } x \geq 1 \end{cases}$$

1.  $f(0)$

2.  $f(1)$

3.  $f(5)$

4.  $f(-4)$

5.  $g(0)$

6.  $g(-3)$

7.  $g(1)$

8.  $g(3)$

9.  $g(-5)$

In Exercise 10–13, graph the function. Describe the domain and range.

10.  $y = \begin{cases} -4x, & \text{if } x \leq 0 \\ 4, & \text{if } x > 0 \end{cases}$

11.  $y = \begin{cases} 4 - x, & \text{if } x < 2 \\ x + 3, & \text{if } x \geq 2 \end{cases}$

12.  $y = \begin{cases} 2x, & \text{if } x < -2 \\ 2, & \text{if } -2 \leq x < 2 \\ -2x, & \text{if } x \geq 2 \end{cases}$

13.  $y = \begin{cases} -1, & \text{if } x \leq -1 \\ 0, & \text{if } -1 < x < 2 \\ 1, & \text{if } x \geq 2 \end{cases}$

In Exercise 14 and 15, write a piecewise function for the graph.

16. A postal service charges \$4 for shipping any package weighing up to but not including 1 pound and \$1 for each additional pound or portion of a pound up to but not including 5 pounds. Packages 5 pounds or over have different rates. Write and graph a step function that shows the relationship between the number  $x$  of pounds a package weighs and the total cost  $y$  for postage.
